

SIZING GUIDE

BRACELETS

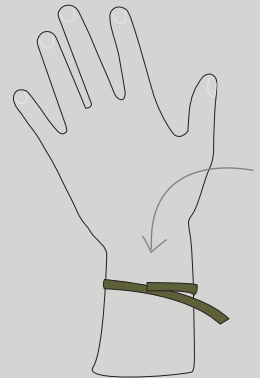

FIND YOUR SIZE

- 1.** SABOTEUR also shows the inner circumference in centimeter in the size selection field on every bracelet detail page. For example: L15 (15.00 cm); L19v (14.00 - 19.00 cm). This inner circumference corresponds to the circumference of your wrist.

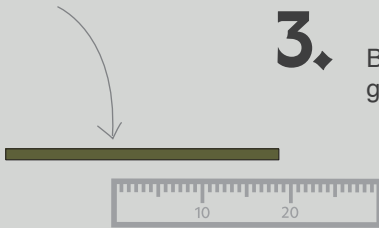

2.

You can easily determine your own bracelet size with a measuring tape or a cord. To measure simply place the cord (or the measuring tape) around your wrist. The ends of the cord should be marked.

- 3.** By using a ruler you can then measure the marked cord and get your wrist size.

CHOOSE YOUR SIZE

If you prefer to wear bracelets tightly, you should select a size that matches your wrist circumference. **For a more comfortable fit we recommend to choose a 0.50 to 1.00 cm larger size.**
